

Philippine Christian University

MATHEMATICS IN MODERN WORLD

First Semester, SY 2025 - 2026

Name: Mekyla Cantiga
Course, Year & Section: BSTM1A

Date: 08/08/2026
Professor: Janine S. Dimazana

Activity No. 2

Topic: Nature by Numbers

Watch the short movie inspired on numbers, geometry and nature by Cristobal Vila

<https://vimeo.com/9953368>

Show your appreciation of this short movie inspired on numbers, geometry and nature by writing an essay to answer the question: What did you learn in this video?

My favorite parts of this short movie are showing how math is more than just numbers, calculations, and problem solving. Mathematics is also part of nature and Numbers are one of the most important parts, which help create natural patterns. In the first clip, I saw how numbers 0, 1, 1, 1, and $3 + 5 = 8$ became my favorite because they form a shape like a seashell. It was surprising to see how numbers are not only elements to make calculations but they also form different patterns and shapes, which can be seen in nature, for example, shells of mollusks and sea creatures or even the arrangement of petals.

I also learned how numbers connect math and nature. When he calculates $(a + b) / a$, It shows how mathematics patterns, such as the beautiful patterns in sunflower petals. The 90° angle can also be seen in the wings of dragonflies, creating beautiful patterns. Many beautiful things around us have patterns that involve mathematics.

After watching the short movie Nature by Numbers, I have also learned to appreciate math more than before. This video also helped me understand why mathematics is important in our lives. It helps us understand the patterns we see around us.
